

# *Speech Processing*

---

Using Speech with Computers

# Overview

- ◆ *Speech vs Text*
  - *Same but different*
- ◆ *Core Speech Technologies*
  - *Speech Recognition*
  - *Speech Synthesis*
  - *Dialog Systems*

# *Pronunciation Lexicon*

- ◆ *List of words and their pronunciation*
  - (“pencil” n (p eh1 n s ih l))
  - (“table” n (t ey1 b ax l))
- ◆ *Need the right phoneme set*
- ◆ *Need other information*
  - *Part of speech*
  - *Lexical stress*
  - *Other information (Tone, Lexical accent ...)*
  - *Syllable boundaries*

# Homograph Representation

- ◆ *Must distinguish different pronunciations*
  - (“project” n (p r aa1 jh eh k t))
  - (“project” v (p r ax jh eh1 k t))
  - (“bass” n\_music (b ey1 s))
  - (“bass” n\_fish (b ae1 s))
- ◆ *ASR multiple pronunciations*
  - (“route” n (r uw t))
  - (“route(2)” n (r aw t))

# *Pronunciation of Unknown Words*

- ◆ *How do you pronounce new words*
- ◆ *4% of tokens (in news) are new*
- ◆ *You can't synthesis them without pronunciations*
- ◆ *You can't recognize them without pronunciations*
- ◆ *Letter-to-Sounds rules*
- ◆ *Grapheme-to-Phoneme rules*

# *LTS: Hand written*

## ◆ *Hand written rules*

- *[LeftContext] X [RightContext] -> Y*
- *e.g. Pronunciation of letter “c”*
- *c [h r] -> k*
- *c [h] -> ch*
- *c [i] -> s*
- *c -> k*

# *LTS: Machine Learning Techniques*

- ◆ *Need an existing lexicon*
  - *Pronunciations: words and phones*
  - *But different number of letters and phones*
- ◆ *Need an alignment*
  - *Between letters and phones*
  - *checked -> ch eh k t*

# *LTS: alignment*

- ◆ *checked -> ch eh k t*

<i>c</i>	<i>h</i>	<i>e</i>	<i>c</i>	<i>k</i>	<i>e</i>	<i>d</i>
<i>ch</i>	<i>_</i>	<i>eh</i>	<i>k</i>	<i>_</i>	<i>_</i>	<i>t</i>

- ◆ *Some letters go to nothing*
- ◆ *Some letters go to two phones*
  - *box -> b aa k-s*
  - *table -> t ey b ax-l -*

# *Find alignment automatically*

- ◆ *Epsilon scattering*
  - *Find all possible alignments*
  - *Estimate  $p(L,P)$  on each alignment*
  - *Find most probable alignment*
- ◆ *Hand seed*
  - *Hand specify allowable pairs*
  - *Estimate  $p(L,P)$  on each possible alignment*
  - *Find most probable alignment*
- ◆ *Statistical Machine Translation (IBM model 1)*
  - *Estimate  $p(L,P)$  on each possible alignment*
  - *Find most probable alignment*

# *Not everything aligns*

- ◆ *0, 1, and 2 letter cases*
  - *e -> epsilon “moved”*
  - *x -> k-s, g-z “box” “example”*
  - *e -> y-uw “askew”*
- ◆ *Some alignments aren’t sensible*
  - *dept -> d ih p aa r t m ax n t*
  - *cmu -> s iy eh m y uw*

# Training LTS models

- ◆ *Use CART trees*
  - *One model for each letter*
- ◆ *Predict phone (epsilon, phone, dual phone)*
  - *From letter 3-context (and POS)*
- ◆ *### c h e c -> ch*
- ◆ *## c h e c k -> \_*
- ◆ *# c h e c k e -> eh*
- ◆ *c h e c k e d -> k*

# *LTS results*

- ◆ *Split lexicon into train/test 90%/10%*
  - *i.e. every tenth entry is extracted for testing*

<i>Lexicon</i>	<i>Letter Acc</i>	<i>Word Acc</i>
<i>OALD</i>	<i>95.80%</i>	<i>75.56%</i>
<i>CMUDICT</i>	<i>91.99%</i>	<i>57.80%</i>
<i>BRULEX</i>	<i>99.00%</i>	<i>93.03%</i>
<i>DE-CELEX</i>	<i>98.79%</i>	<i>89.38%</i>
<i>Thai</i>	<i>95.60%</i>	<i>68.76%</i>

# Example Tree

```
For letter V:  
if (n.name is v)  
    return _  
if (n.name is #)  
    if (p.p.name is t)  
        return f  
        return v  
if (n.name is s)  
    if (p.p.p.name is n)  
        return f  
        return v  
return v
```

# *But we need more than phones*

- ◆ *What about lexical stress*
  - *p r aa1 j eh k t -> p r aa j eh1 k t*
- ◆ *Two possibilities*
  - *A separate prediction model*
  - *Join model – introduce eh/eh1 (BETTER)*

	<i>LTP+S</i>	<i>LTPS</i>
<i>L no S</i>	<i>96.36%</i>	<i>96.27%</i>
<i>Letter</i>	<i>---</i>	<i>95.80%</i>
<i>W no S</i>	<i>76.92%</i>	<i>74.69%</i>
<i>Word</i>	<i>63.68%</i>	<i>74.56%</i>

# *Does it really work*

- ◆ *40K words from Time Magazine*
  - *1775 (4.6%) not in OALD*
  - *LTS gets 70% correct (test set was 74%)*

	<i>Occurs</i>	<i>%</i>
<i>Names</i>	<i>1360</i>	<i>76.6</i>
<i>Unknown</i>	<i>351</i>	<i>19.8</i>
<i>US Spelling</i>	<i>57</i>	<i>3.2</i>
<i>Typos</i>	<i>7</i>	<i>0.4</i>

# Spoken Dialog Systems

- ◆ *Information giving*
  - *Flights, buses, stocks weather*
  - *Driving directions*
  - *News*
- ◆ *Information navigators*
  - *Read your mail*
  - *Search the web*
  - *Answer questions*
- ◆ *Provide personalities*
  - *Game characters (NPC), toys, robots, chatbots*
- ◆ *Speech-to-speech translation*
  - *Cross-lingual interaction*

# Dialog Types

- ◆ *System initiative*
  - *Form-filling paradigm*
  - *Can switch language models at each turn*
  - *Can “know” which is likely to be said*
- ◆ *Mixed initiative*
  - *Users can go where they like*
  - *System or user can lead the discussion*
- ◆ *Classifying:*
  - *Users can say what they like*
  - *But really only “N” operations possible*
  - *E.g. AT&T? “How may I help you?”*
- ◆ *Non-task oriented*

# System Initiative

## ◆ *Let's Go Bus Information*

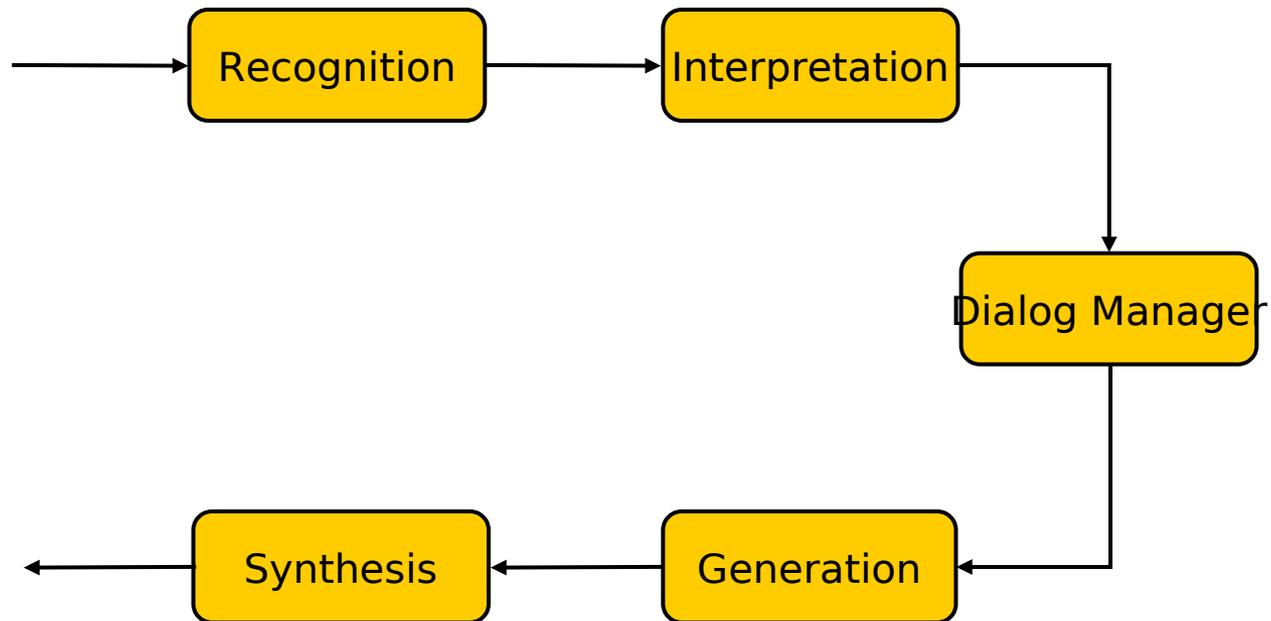

- *412 268 3526*
- *Provides bus information for Pittsburgh*

## ◆ *Tell Me*

- *Company getting others to build systems*
- *Stocks, weather, entertainment*
- *1 800 555 8355*

# *SDS Architecture*

# *SDS Components*

- ◆ *Interpretation*
  - *Parsing and Information Extraction*
  - *(Ignore politeness and find the departure stop)*
- ◆ *Generation*
  - *From SQL table output from DB*
  - *Generate “nice” text to say*

# *Siri-like Assistants*

- ◆ *Advantages*

- *Hard to type/select things on phone*
- *Can use context (location, contacts, calendar)*

- ◆ *Target common tasks*

- *Calling, sending messages, calendar*
- *Fall back on google lookup*

# SPDA: Scope

- ◆ *“Call John”*
- ◆ *“Call John, Bill and Mary and setup a meeting sometime next week about Plan B that’s fits my schedule”*
- ◆ *“Make a reservation at a local Chinese restaurant for 4 at 8pm.”*
- ◆ *“You should call your mom as its her birthday”*
- ◆ *“I have sent flowers to your mom as its her birthday”*

# CALO (DARPA)

- ◆ *Cognitive Assistant that Learns Online*
  - *DARPA project (2003-2008)*
  - *Led by SRI (involved many sites, including CMU)*
- ◆ *Personal Assistant that Learns (Pal)*
  - *Answers questions*
  - *Learn from experience*
  - *Take initiative*
- ◆ *Spin-off company -> SIRI*
  - *Acquired by Apple in April 2010*

# *SPDA: Platform*

- ◆ *Desktop*
  - *Computational power*
- ◆ *Phone (non-smartphone)*
  - *General Magic*
    - *Was handheld, became phone based*
  - *Led into GM's OnStar*
- ◆ *Smartphone*
  - *Local to device*
  - *With Cloud*

# Smartphone + Cloud

## ◆ Smartphone

- *Know about user*
  - *Contacts, Schedule etc*
  - *Same speaker*
- *Some computation possible on device*

## ◆ Cloud

- *Learn from multiple examples*
- *Retrain acoustic/language/understanding models*

# *Voice Search and User Feedback*

- ◆ *Voice Search*
  - *Google, Bing, Vlingo, Apple*
- ◆ *Get users to help label the data*
  - *Listen to user*
  - *Show best options*
    - *They select which one is correct*
- ◆ *Find out how users actually speak*
  - *Full sentences vs “search terms”*
  - *How do English speakers say ethnic names*

# *Voice Search: Simplifications*

- ◆ *Too many words ...*
- ◆ *Context*
  - *Where you are (location: home/not home)*
  - *What is on your phone (contacts)*
  - *What you've said before*

# Personality

- ◆ *Have a character*
  - *Calls you by name (you choose)*
  - *Pushy, helpful, nagging ...*
  - *Allow user choice*
- ◆ *Personalize it*
  - *May form better relationship with it*
- ◆ *e.g. Siri*
  - *US and UK are female/male*

# *Make it do things well*

- ◆ *Targeted apps*
  - *Chose what it will do well*
- ◆ *Say, 12 different apps*
  - *Have target (hand written) interaction*
  - *Chose what fields you need, and how to intereact with the back end data*
  - *If all else fails dump result in Google*
- ◆ *Hardware aid*
  - *Infra-red detector for VAD*

# Marketing

- ◆ *Make sure people know its there*
  - *(Voice search has been on PDA's for years)*
  - *Get a \*lot\* of people to use it*
  - *Give “silly” examples*
    - *People will repeat them, you can adapt your system and expect them to say them*

# *Know Your Users*

- ◆ *Young educated*
- ◆ *Standard English speakers*
  - *(Non-native too?)*
- ◆ *Can you train them to use it better*
  - *Get them to adapt*

# *Will it work?*

- ◆ *Will people talk in public*
  - *Talking on the phone is now acceptable*
  - *Talking to the phone ...*
- ◆ *Will people continue to use it*
  - *Cool at first, but easier to use menus*
  - *Only use for setting alarms*
- ◆ *Long term use ...*
- ◆ *But others may join in anyway*

# *Speech and NLP*

- ◆ *Same statistical methods*
  - *Bayes, n-gram, classification trees*
- ◆ *NLP in speech*
  - *POS tagging (in new languages)*
  - *Parsing (Syntactic and Prosodic)*
  - *Information extraction*
  - *Dialog/Discourse analysis*
  - *“ASR output” as “noisy” text*

# *Novel Speech and Language*

## ◆ *Generating Poetry*

- *Healthcare messages for non-literate*
- *Appropriate rhyming and cultural references*

## ◆ *Emotion ID*

- *Is this person angry when they are calling us*

## ◆ *Singing*

# 11-492 *Speech Processing*

- ◆ *Fall Class*

- ◆ *Covers*

- *Speech Recognition, Synthesis, Dialog systems*
- *Speech ID, evaluation*
- *Building real systems (ASR, TTS, SDS)*

# *LT Minor*

- ◆ *Language Technologies Minor*
  - *11-721 Grammars and Lexicons*
  - *Plus 3 electives e.g.*
    - *11-411 Natural Language Processing*
    - *15-492 Speech Processing*
    - *11-441 Search Engines and Web Mining*
    - *Or other LT (Masters) course*
  - *Plus project*
    - *Often leading to a publication*
